WHAT IS WATERLESS CAR WASH

A waterless car wash is an eco-friendly & efficient method that uses no water at all. It uses high lubricity sprays to polish and wash the vehicle's bodywork.

The spray's high lubricity encapsulates dirt and dust particles. This process is similar to how water removes dirt.

You have to simply spray on the surface of the car and then wipe it off. This process removes any light dirt or stains from the car's surface. The efficiency of the waterless car wash is usually better than using water-based methods.
